Hungerford-Stoneridge Stormwater Pond Maintenance Dredging

Project

Description:

A contractor for the City's Department of Public Works will remove accumulated sediment in the Hungerford-Stoneridge stormwater management pond over the next two weeks. Beginning the week of April 16, the contractor will first partially drain the pond, and then will use excavating equipment to dredge the sediment from the pond forebay, which is closest to the Cabin John Parkway entrance. The contractor will not dredge the entire pond at this time.

The contractor will employ pumps and generators, backhoes and other excavating equipment and dump trucks. No tree removal is expected. All disturbed areas will be restored with grass after the work is completed.

Purpose:

Routine maintenance of a stormwater management pond. This will not result in any permanent changes to the surrounding neighborhood, but there will be short-term impacts from construction traffic on Cabin John Parkway and daytime construction noise. The forebay area receives water from nearby Cabin John Creek and tends to fill up first with sediment. The dredging is needed to remove the sediment that is trapped by the stormwater management pond forebay's normal function, and restore the pond's effectiveness.

Location:

In the Hungerford-Stoneridge Pond area between the intersection of Cabin John Parkway and Leverton Road and Wootton Parkway.

Timeline:

Work is anticipated to begin the week of April 16 and should take approximately two weeks.

Cost:

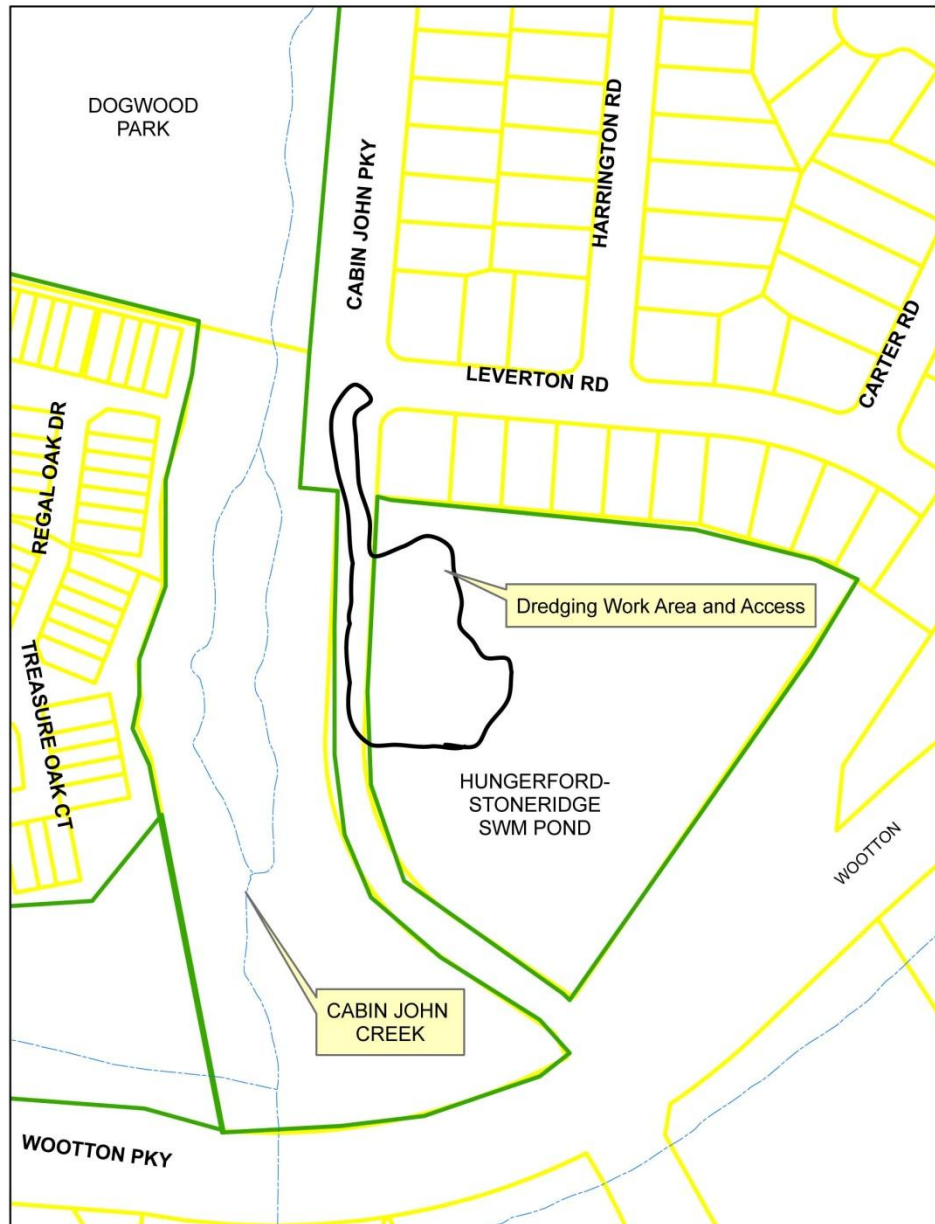

Cost is estimated at \$50,000.
